

## Table for quantitative and proportion of additives for diving equipment disinfection

Current scientific studies suggest a 1:50 dilution of BLEACH containing 5% of Sodium Hypochlorite (concentration of 0,1% or 1'000 ppm of active ingredient and dilute in water in right measure).

Here's a practical example of how to dilute the product into the needed volume/quantity of water, containing 0,1% of active ingredient:

LITRES of WATER	DOSE of BLEACH -CLOROX- Sodium Hypochlorite <u>Concentration 5%</u>
1 Litre	0,02 litres (20 ml)
5 Litres	0,1 Litres (100 ml)
10 Litres	0,2 Litres (200 ml)
20 Litres	0,4 Litres (400 ml)
30 Litres	0,6 Litres (600 ml)
40 Litres	0,8 Litres (800 ml)
50 Litres	1 Litre
100 Litres	2 Litres
1000 Litres (1 m3)	20 Litres
